ANSI/ASHRAE Standard 55-2010
(Supersedes ANSI/ASHRAE Standard 55-2004)
Includes ANSI/ASHRAE addenda listed in Appendix I

ASHRAE STANDARD

Thermal Environmental Conditions for Human Occupancy

See Appendix I for approval dates by the ASHRAE Standards Committee, the ASHRAE Board of Directors, and the American National Standards Institute.

This standard is under continuous maintenance by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. The change submittal form, instructions, and deadlines may be obtained in electronic form from the ASHRAE Web site (www.ashrae.org) or in paper form from the Manager of Standards. The latest edition of an ASHRAE Standard may be purchased from the ASHRAE Web site (www.ashrae.org) or from ASHRAE Customer Service, 1791 Tullie Circle, NE, Atlanta, GA 30329-2305. E-mail: orders@ashrae.org. Fax: 404-321-5478. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to www.ashrae.org/permissions.

The blank panels of the filter bank will be permanently fixed to the frame of the filter bank, 6.6 humidifiers. Ashrae The anteroom will be at a positive pressure with respect to both the IIA / PE room and the aisle or space. The following instructions are applicable to the proposals for modifying presented in electronic format. Invasive image procedures: Room in which radiographic images are used and in which instruments or devices are introduced in the patient through of the skin or body hole under stress conditions for diagnosis and / or treatment. Through this I declare that I have the authority and the power to grant this liberation of copyright. It has not been processed in accordance with the requirements of ANSI for a standard and may contain material that has not been subject to public revision or a consensus process. Through its manual, the corresponding chapters will contain updated standards and design considerations as the material is systematically reviewed. Energy recovery systems with leakage potential from the following exhaust air sources will be used: ER waiting rooms, triage, erotamination of ER, radiology waiting rooms, dark room, sputum collection by bronchoscopy and administration of pentamidine, laboratory fume hood and other escape gases of laboratory equipment by direct ducts, anesthesia elimination, autopsy, non-refrigerated retention, non-refrigerated body retention endoscopic cleaning, medical supplies and centralized surgical dirty room or decontamination, general laundry, storage of hazardous materials, reprocessing room of dialitors, hot nuclear medicine laboratory, nuclear medicine treatment room and any other space appointed by the competent authority or the ICRA. Fine-tube radiation units, induction units and convection units serving the patient rooms should be cleaned quarterly or in an effective preventive maintenance cycle. They should be tested daily for negative pressure each time an infectious patient is present. Modifications to Table 7-1: A new entry Â"Intermediate careÂ" and the entries Â"TriageÂ" and Â"RadiologyÂ" waiting rooms" are reviewed. 7NIOSH Critical Documents. 5. The Chairman and Vice-Chairman of the Project Committee shall be members of ASHRAE; while other committee members may or may not be members of ASHRAE, all must be qualified in the topic of the Standard. A vapor barrier is not required for insulating materials that do not absorb or transmit moisture. An exception to Section ³ n 7.4.1 is ³ to allow better control of parts in ³ fanos, as indicated by the NIH research ³. Standard 12ANSI/ASHRAE 62.1-2010, Ventilation ³ for Acceptable Indoor Quality, Atlanta: ASHRAE. 2010b. 6. This ³ clarifies the relationship ³ presis³ with the requirements of adjacent areas for spaces where gastrointestinal endoscopy procedures are performed. All air flow surfaces of air handling units, e.g. interior surfaces and components, comply with section ³ n 5.4 of the ANSI/ASHRAE 62.1 standard, Ventilation ³ an Acceptable Indoor Air Quality.12 (For more information³ n, see ASHRAE [2010b, 2005b] in the Informational Appendix B). 6.3.1 External air inlet 6.3.1.1 General. When HEPA filters are present in the diffuser of the protective environmental ³ rooms Figure A-3 16, the filter should be replaced depending on the ³ of the pressure³ nCod. This Standard greatly benefits from your insight and tireless contributions to the prevention ³ infections in health care. This program will be prepared in the planning phase ³ the design. ANSI/ASHRAE/ASHE Standard 170-2013 (ANSI/ASHRAE/ASHE Supersedes Standard 170-2008) Includes ANSI/ASHRAE/ASHE additions listed in Appendix C Breakdown of health care facilities³ See Appendix C for approval dates ³ by the ASHRAE Standards Committee, noitcurtsnoC noitcurtsnoC tcuD CAVH ,ANCAMS01 .etutitsnI sdradnatS lanoitaN naciremA le y ,serotceriD ed atnuJ EHSA al ,EHSA al ,EHSA al ,EHSA al ,EHSA al ,EARHSA al ,EARHSA ed avitceriD atnuJ Metal and flexible (Third edition³ n: 2005). Nasseri Janice C. f. 2.2 This standard applies to new buildings, additions to existing buildings and alterations to existing buildings identified within this standard. Acceptable tolerances for d system temperatures and pressures. 4.1.2 Existing Buildings 4.1.2.1 Additions to Existing Buildings. Additions must be in accordance with the provisions of this standard. ASHRAE is a registered trademark of the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. Specifically, it implements the following changes: 1. 7. Delete the example in note (j) to Table 7-1. The addendum ³ d is used to show that, on the basis of recent research, a reduction in the lower limit of the moisture range provided for eight spaces designed for short patient stays was justified ³. In the case of spaces where Table 7.1 allows air recirculation ³ room units, the part of the minimum total air that is modified per hour required for a space greater than the minimum hourly outdoor air changes required by the component may be provided by recirculation room air conditioning units³. The transfer grid to the toilet room will be located above the occupied area. Additional supply diffusers may need to be used to provide additional ventilation ³ the operating room to meet the environmental requirements of Table 7.1 relating to temperature, humidity, etc. The Consensus is defined by the American National Standards Institute (ANSI), of which ASHRAE is a member and which has approved this standard as an NSA, as substantial agreement reached by directly and materially affected interest categories. Chantilly, VA: The sheet metal and air conditioning outlets of contractors Â Â National Association, Inc. at the top of the They will be placed with the lower part of the air inlet at a minimum of 1 m (3 feet) above the roof level. It is first first of a mandatory minimum requirement and, as such, can not always offer the best of last generation generation Elbanepo, Sekatni Ria Morf Yllatnoziroh TF 01 Naht SELL TON DETACOL EB LLAHS DNA LEVER FORE EVOBA) M 3 (TF 01 TSAEL TA NOTICERID LACITREV A NI EGRAHCSID Fo Rehgih EHT, Tsixe Dradnats SIHT FO 1.7 Elbat DNA 211.26 DRADNATS HTOB NI SETAR DEBIRCSERT HTAW SERA EREHW .SMETSYS Tsuahxe Moor Noitalosi Suoitcefni Enrobria 2.8.6 .3.8.6 NOISTCES NI DEWOLLA SA TPECXE REFSNART RO, REVOYRRAC, EGAKAEL, EGRUP 3102-071 Dradnats EHSA / Earhsa / ISNA AIV Maertsria Ylppus EHT KCAB Ria Tsuahx Fo Noitanimatnocssorc Fo Tnuoma Yetsys EHT, Dezilitu Era Smetsys YrevoCer YGrene Fi. Guidelines for the Control of Environmental Infections in Health Care Centers. Seth Rajendra N. 6NFPA. Rousseau, Co-Chair and Michael P. For single-bed patient rooms using Group D diffusers, a minimum of six total ach shall be provided and calculated based on the volume from finished floor to 6 ft (1.83 m) above the floor. Modifications to Section 7.5.1, ¢ÂÂÂMorgue and Autopsy Rooms¢ÂÂÂ: Requirements are added for a minimum differential pressure from these spaces that may contain potentially infectious remains. For more information, visit the Standards and Guidelines section of the ASHRAE Bookstore at www.ashrae.org/bookstore. Compliance documents are those plans, specifications, engineering calculations, diagrams, reports, and other data that are approved as part of the permit by the authority having jurisdiction. PE rooms should be tested for positive pressure daily when an immunocompromised patient is present. Use additional pages if needed. 8. 4.3.2 Construction Details. However, ASHRAE does not guarantee, certify, or assure the safety or performance of any products, components, or systems tested, installed, or operated in accordance with ASHRAE¢ÂÂÂs Standards or Guidelines or that any tests conducted under its Standards or Guidelines will be nonhazardous or free from risk. SCOPE 2.1 The requirements in this standard apply to patient-care areas and related support areas within health care facilities, including hospitals, nursing facilities, and outpatient facilities. e. This lining and cover shall be factory installed. 8.5 Documentation of New or Remodeled HVAC Systems. (See Figure A-3 in Informative Appendix A.) 6.3.2 Exhaust Discharges. IEST PR-CC001.3, HEPA and ULPA Filters. Grzywacz Rita M. These requirements are similar to those of the 2010 FGI Guidelines for the Design and Construction of Health Care Facilities but have been clarified. ANSI/ASHRAE/ASHE Standard 170-2013 CSA Group. ASHRAE, Atlanta. Reason and substantiation: 7. 2 2. m. The duct supply system shall meet the following requirements for cleanliness: a. Poorly ventilated Attention centers can increase the concentration of contaminants transported by the air, including fungi or mold, which can cause allergic responses even in healthy workers and occupants. Special maintenance for HVAC units The following special maintenance procedures are recommended for medical care facilities. The air treatment unit housing will be designed to avoid water intrusion, withstand corrosion and allow access for inspection and maintenance. ELECTRONIC MAIL: Fax: 678-539-2129. WC (Ã ¢ â € 2,5pa Â "). Aii rooms b. The differential pressure between the AI rooms and the adjacent spaces that are not AI rooms will be at a minimum of â € 0.01 Â ". ADDA V acknowledges the applicability of such research to clinical use of spaces whose function is the recovery that are also designed for short standards of patients. Constant volume air flow is required for a consistent ventilation for the protected environment. 6.5 Heating and refrigeration systems 6.5.1 Refrigeration coils and drainage cuvettes. The room will be equipped with at least two low side return or exhaust grids, spaced in opposite corners or as far as possible, with the bottom of these grids installed approximately 8 inches. Hardin Richard D. 1. Reiniche, Standard Manager Special Note This American national standard (ANS) is a national volunteer statement developed under Ashrae's auspices. O & M b procedures. ANSI / ASHRAE / ASHE standard 170-2013 5 Table 6.7.2 Designation of air intake space (according to the function) Source air intake classification: Operating rooms, Procedures Rooms (all Class A, B and c surgeries) Primary supply diffusers Group E, additional non-aspirant supply diffusers, group and protection environments Group E, units of intensive care of heres in the candidates (burning units) Group e, Trauma rooms in the aspiring group to the group EE Rooms for patients with individual bed C Group A, group d The group and all deemed cares For patients patients Group A or Group E All other spaces No requirement Notes: a. Proposed change: 6. high-risk immunocompromised patients: patients at increased risk of infection ³ air- or water-borne micro-organisms. The informational charts of this standard and the informational notes located within this standard contain recommendations, explanations, and other non³mandatory information and are not part of this standard. 6.4.4 Filter frames. Send a single email ³ the change proposal files to: Alternatively, send the paper versions to: ASHRAE Manager of Standards 1791 Tullie Circle, NE Atlanta, GA 30329-2305 Or fax them to: Attn: Responsible for Standards 404-321-5478 The form and instructions for the single ³ can be obtained from the Standards section of the ASHRAEÃ¢ Home page, www.ashrae.org, or by contacting a standards secretary by telephone (404-636-8400), fax (404-321-5478), e-mail³ ico ([emailÃ protected]) or mail (1791 Tullie Circle, NE, Atlanta GA 30329-2305). New paragraph 6.7.5 is added to prevent ducts from damaging (or being adversely affected by) the construction ³ special walls. National Institute of Occupational Safety and Health, available on the website of the Centers for Disease Control and Prevention³ (CDC): http:// www.cdc.gov/niosh/pubs/ criteria_date_desc_nopubnumbers.html 8NFPA 99-2005, Standard for Health Care Facilities. The psiqui, inpatient³ and inpatient wards are designed with diffusers, grilles and safety records. The air distribution patterns ³ within the environmental protection room ³ be adjusted to the following: 1. In this addendum³ the design parameters of Table 7-1, "Design torque" or "" are also for the corridors of resident units. Review ³ the literature: Ventilation ³ and transmission of airborne diseases. June 22, 2013 June 26, 2013 July 3, 2013 July 24, 2013 This adequate clarifies the requirements for an examination room / emergency service in Table 7-1, Ã ¢ parameters Âœ Design Ã ¢ â € La La La From the examination room / treatment of the emergency service is described in FGI-2010, paragraphs 2.2-3.1.3.6. September 26, 2013 November 8, 2013 September 16, 2013 December 5, 2013 June 22, 2013 June 26, 2013 July 3, 2013 This addition provides a clarification on the relative humidity requirements of the design For spaces whose function is recovery. Clarify planned operation of furniture and deliver rooms by cesacation in section A1.1. On October 2, 2012 October 26, 2012 September 22, 2012 October 27, 2012 This adequate provides additional information on design with other possible pharmacy requirements that can be imposed by state pharmacy regulations. The ventilation of PE rooms must meet the following requirements: a. The new point 6.7.3 is added to demand the coordination between the smoke zones and the zones of air manipulation units in order to reduce the number of smoke dampers necessary in an installation at a minimum. If any type of variable air volume system or load reduction is used for the conservation of the energy, you should not compromise the ratio ratios of the pressure or the minimum changes of air required by the table. July 26, 2013 July 30, 2013 July 20, 2013 July 31, 2013 June 22, 2013 June 26, 2013 July 3, 2013 July 24, 2013 This adequate clarifies Table 7-1, Ã ¢ Parameters âœ Ã Â Â â € ™ â € Minimum requirements for patient rooms. If radiant heating is available for an IIA room, an environmental protection room, an intensive wound care unit (burns unit), an operating room or a procedural room (for any kind of surgery), Flat and smooth radiant panels or wall panels with exposed cleaning surfaces will be used or radiant from the ground. 2002. 15. The new section 7.5.2 is amended to improve infection control ³ spaces where infected patients are likely to be coughing. Streifel Michael E. ASHRAEÃ¢ Â the main concernÃ ³ n Â for the environmental impact to be in the place where the equipment operates within the scope of Â ASHRAE. 6.2 Design of the air handling unit 6.2.1 Air handling unit³ Air handling unit For the purposes of this standard, the abbreviation "refers to the room that provides insulation. The ICRA will establish procedures to minimise the disruption of facility operation and the distribution of dust, odours and particles. Essential accessories: those components of a system required to enable the proper operation of that system that are reasonably prone to mechanical failure (e.g. pumps, fans, control air compressors). Unresolved objectors to informational materials are not offered the right to appeal in Ashrae or ANSI). APPENDIX INFORMATORS B Informative references and Bibliography ACS. The owners/planning managers of the medical care facilities will prepare a detailed program that will include the expected clinical service in each space, it is expected that the specific user equipment can be used in each space, and any special clinical needs for temperature, humidity and pressure control.. Any new mechanical equipment installed together with the alteration, as a direct replacement of existing mechanical equipment must comply with the provisions of Sections 6.2, 6.4, 6.5 and 6.6. 4.1.2.2.2 Space alterations. Will the proposed change increase the cost of engineering or construction? The design of such systems will also allow easy access for scheduled preventive maintenance and cleaning. Arrangements for the area. Selected standards are also offered in Redline versions that indicate the changes made between the active standard and its previous version. This filter will be placed upstream of any cold surface, so that all air passing over the cold surface is filtered. If additional background documents are included to accept the submitted changes, it is preferable that they are also in ³ as documents processed â â by the word or scanned. 8.6 Duct cleaning. For the purposes of this standard, the performance of these diffusers must be measured in average speed terms. average. Modifications to Section 6.4, Ã ¢ â € Filtering â €: Requirements to improve the performance of filter banks are added to address the problem of air derivation by filtering means. Feed air diffusers will be located above the patient's bed, unless it can be demonstrated that such a location is not practical. 14. Guidelines for the prevention of mycobacterium tuberculosis transmission in health facilities. 4 Exception: The reserve capacity is not necessary if the temperature of the heating dry focus of 99% ASHRAE for the installation is higher than or equal to 25 ° F (Ã ¢ â € 4 ° C). "Short-term excursions will be allowed from the required pressure relationships while the doors move or open temporarily. This letter is not used in this table. The proposed addition clarifies the use of recirculating HVAC units by modifications to four parts of the current standard. For each device and / or mechanism, it will be available from a local visual means that indicates each time the differential pressure is not maintained. When necessary, adequate exhaust bells and devices will be installed for the elimination of harmful gases or chemical vapors in accordance with NFPA 99.8 W. It is merely informative and does not contain the necessary requirements for compliance with the standard. The spaces that must be found in a negative pressure relationship according to Table 7.1 and that they should not be exhausted will use the power air flow to calculate the total minimum changes of air per hour required. Locate humidifiers within the air handling units or conduits to avoid the accumulation of moisture in the downstream components, including filters and isolation. 8.4 Planning for the control of infections during remodeling of an existing installation. Centro de Nursing Emmerich Julie M.: An installation that ATTENTION TO RESIDENTS, TREATMENT AND SERVICES (including specialized nursing, subacute attention, and Alzheimer's â € S and other facilities for dementia). General mechanical equipment rooms. This standard usually specifies a range of that will fulfill a specific requirement of the standard. Compliance 4.1 Compliance requirements 4.1.1 New buildings. Positive pressure exhaust ducts located in the mechanical equipment rooms should be sealed according to the Class A.10 ANSI / ASHRAE / ASHE 170-2013 Conduct Sealing Standard. Table 6.4 Minimum Efficiencies of the Filter Bank of Filters No. 1 (MERV) to Filter Bank No. 2 (MERV) to Operations Rooms (Class B and c surgery); diagnostic radiology and hospital and ambulatory therapy; Delivery and recovery spaces for pivoted patients 7 14 ATTENTION, TREATMENT AND DIAGNOTSTY FOR INTERNATURE Patients, and those spaces that provide direct service or clean supplies and clean processing (except as indicated below); AII (Rooms) 7 14 Protective environments (PE) 7 HEPAC rooms, D 13B administrative NR; Bulk storage; dirty waiting spaces; food preparation spaces; and Laundries 7 NR All others Ambulatory Patient Spaces 7 NR Nursing Facilities 13 NR Psychiatric Hospitals 7 NR Â RES OF ATTENTION, TREATMENT AND SUPPORT RESIDENT IN HOSPICAL FACILITIES FOR HOSPITAL PATIENTS 13 NR Â ATTENTION REAS , treatment and support residents in assisted living facilities 7 NR Laboratories of space designation (according to function); Procedures Rooms (Surgery Class A), and associated semi-detrining spaces NR = No Required Notes: a. 16. At all service points, authorization is required for the mechanical equipment in order to allow personnel and work space. The alterations of the spaces listed in Table 6.4 must meet the requirements of points 6.7 and 7, "â € spatial ventilation", apply to the specific parts of the building and its systems that are altering. Âœ i. 4.1.2.2.1 Alterations of the heating, ventilation and air system The options of supply in chopophone (classes suruginS B and C) will be designed and installed to allow internal cleaning. This addition also includes additional inputs for Table 7-1. Each EP room will meet the requirements of tables 6.4, 6.7.2 and 7.1. 7.1. The rooms will have a permanently installed device and / or mechanism to constantly control the air pressure difference between the room and the hall when they are occupied by patients who require a protection environment, regardless of whether there is an anteroom. Operating room (class B surgery): provides minor or larger surgical procedures performed with oral, parenteral or intravenous sedation or performed with the patient under analgéic or dissociative drugs. It is not necessary that all the air is exhausted if the dark room machine has a connected cleaning exhaust conduit and complies with the ventilation standards with respect to NIOSH, OSHA and the exposure limits of local employees.2, 3 h. 7.2.3 Combination of Infectious Insulation Rooms AÃ © Reo / Protective Environment (AII / PE). The grids or air records exhaust in the patient's room will be placed directly on top of the patient's bed, on the roof or on the wall near the bedside header, unless it can be demonstrated that such a location is not practice. In the case of spaces that require a positive or negative pressure relationship, the number of air changes can be reduced when the space is unemployed, provided that the required pressure relationship is maintained with the adjacent spaces while the space is unoccupied and that the minimum number of air changes indicated at any time is restored when space is unemployed. Operating rooms (class B and c surgery), including delivery halls (cesarean) (for more information, see NFPA [2012] in the informative application B.) 6.1.2 Heating sources and refrigeration 6.1.2.1 provide sources of heat and accessories essential in sufficient number and arrangement to meet the needs of the installation (reserve capacity), even when any of the heat sources or accessories 9002 9002 ed erbmeivon ed 61 9002 ed erbmeitpes ed 42 9002 ed erbutco ed 42 9002 ed erbutco ed 41 3102-071 dradnatS EHSA/EARHSA/ISNA 81 71 .b .n 8.99 APFN le ratlusnoc ,sotisiuqer sorto araP .oiranitur otneiminetnam o aÃreva anu a odibed odnanoicnuf ©Ãtse on 26, 2010 June 30, 2010 July 9, 2010 July 10, 2010 This addendum adds additional requirements and clarifies some prerequisites. 2000. ANSI/ASHRAE/ASHE Standard 170-2013 9. The IIA room described in this standard shall be used to isolate the ³ in air of infectious diseases, such as sarampi³ n, chickenpox or tuberculosis. For reprint permission³ please visit www.ashrae.org/permissions. 6.3.1.3 . Each room of IIA shall meet the requirements of Tables 6.4, 6.7.2 and 7.1. The rooms of IIA shall have a permanently installed device or mechanism to constantly monitor the air pressure difference between the room (when occupied by patients with a suspicion of airborne infectious disease) and the corridor, whether or not there is an antecÃ mara. anteroom.
